Key topics for ELTeC@Wikidata

- Wiki-ELTeC data lecture session:
 - Wikidata introduction on Serbian novels
 - Wiki-ELTeC schema
 - metadata from header
 - main characters
 - their relations
 - places
 - Pipeline for Wiki-ELTeC data population
 - Predefined SPARQL query exploration
- Hands-on:
 - OpenRefine tool for
 - QuickStatement for ...
 - population of Wikidata with 10 novels for 6 languages (deu, eng, fra, hun, por, slv)

SrpELTeC data structure in Wikidata

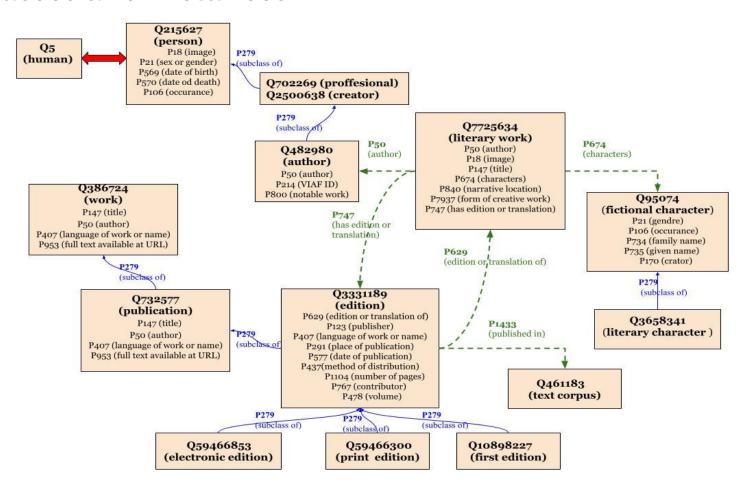

Data preparation and mapping with Wikidata

The work on the ELTeC corpus envisages a basic annotation for all subcollections, the so-called level 1 annotation. The annotation consists of marking the basic structural elements of the text (chapters and other units) and some basic textual elements. The annotation was made in accordance with the TEI recommendations (TEI Consortium 2021), where from a rich set of elements that define these recommendations, only a subset was selected as mandatory or allowed.

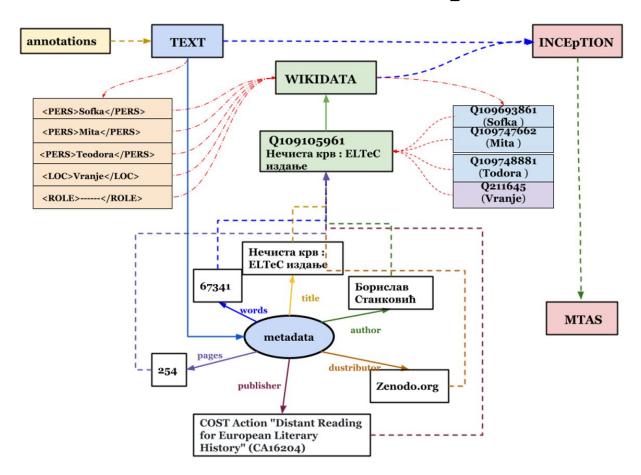

A metadata header <TeiHeader> is required for each text annotated in accordance with TEI recommendations, so it is the case with all ELTeC corpus novels. The mandatory header elements are uniform for all collections and they must contain:

- 1. Description of the electronic edition, which includes the title of the work and the name of the author as well as the statements of responsibility (scanning, correction, annotation), date of publication, size (measured by the number of words). The author and the work can be joined by identifiers, such as viaf and wikidata.
- 2. A brief catalog description of the first edition and the edition used as the source for ELTeC (if different from the first edition).
- 3. Description of the text in terms of meeting the balance criteria (e.g. author's gender, size, date of publication,...).
- 4. Review of all changes to the digital edition since its first publication.

Structure of SrpELTeC Wikidata items (example of ELTeC edition)

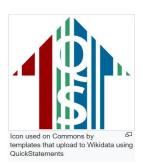

Automatization with web resources

Since the automation of the process of data preparation and import was envisaged, the different solutions were analysed and finally synergy of OpenRefine and QuickStatements tools was chosen as the best choice.

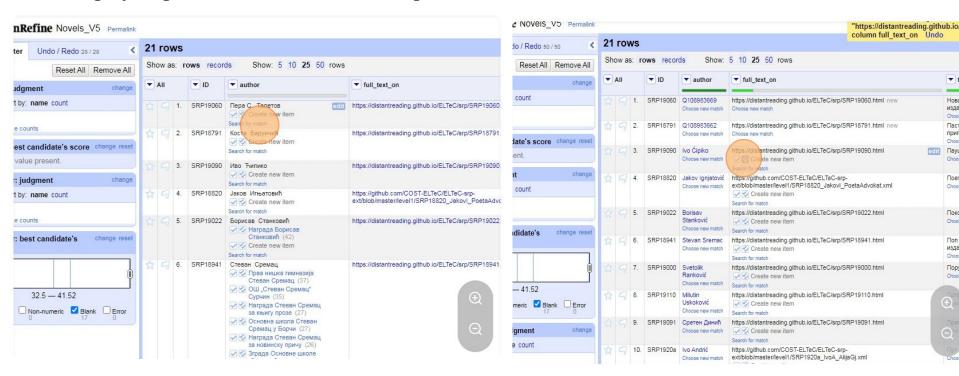

Tutorial for automatization using OpenRefine and QuickStatement

Tutorial for automation using OpenRefine and QuickStatement

... Step by step, ilustrated tutorial with SrpELTeC text collection

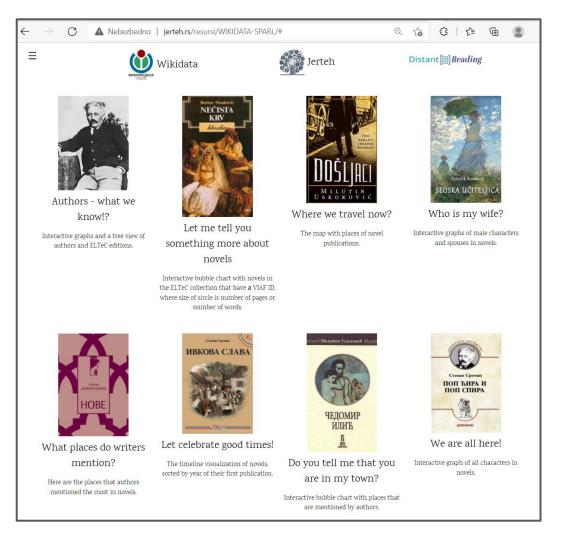

When creating new item "Create new item" manual option was chosen for each cell, to check the results.

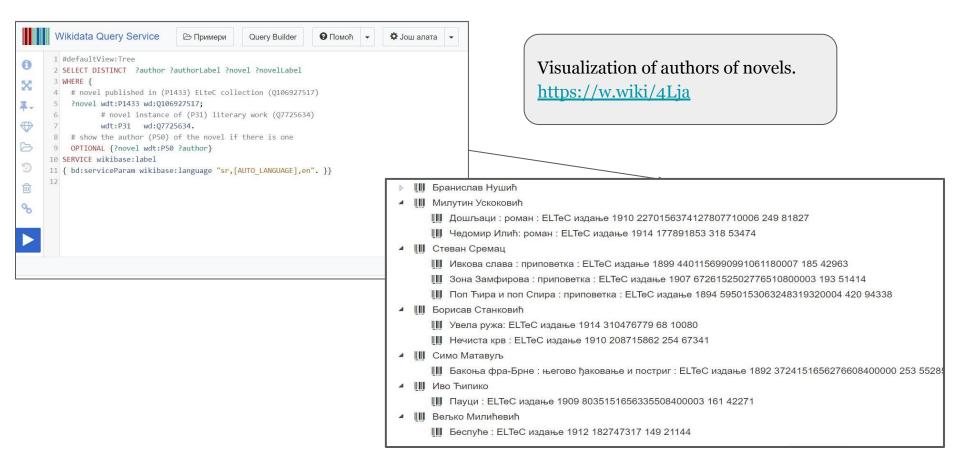

There is an option to automatically create a new item, for each cell in the column.

SrpELTeC @Wikidata status

Wikidata has 100 novels from SrpELTeC plus 19 novels from SrpELTeC-ext collection with associated items for the first edition and electronic SrpELTeC editions.

That means that we automatically added approx **4300** statements.

Towards hands-on

- The presented example can be seen as succesful show cases
- Similar approach can be used for other language subcollection

Vol 21 No 2 (2021): Infotheca - Journal for Digital Humanities | Infotheca - Journal for Digital Humanities (bg.ac.rs)

<u>Serbian ELTeC Sub-Collection in Wikidata | Infotheca - Journal for Digital Humanities (bg.ac.rs)</u>

Step by step novels:

https://scribehow.com/shared/OpenRefine AOPgpu7dRqmxUkYBtVbGgQ

Hands-on: Data

- Wikidata account creation
- Dataset for each participant separate
- Wikidata exploration
- Insert of one novel manualy
- OpenRefine automatic preparation
- QuickStatement insert
- SPARQL exploration
- INCEPTION:tsbgd:ELTec@Wikidata, http://inception.jerteh.rs/

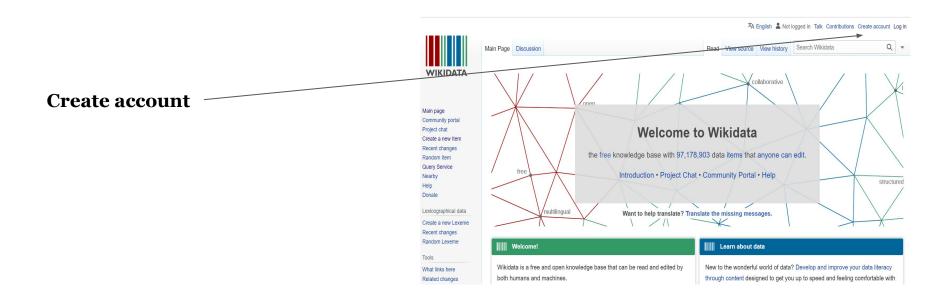

Working google sheets for hands-on

https://docs.google.com/spreadsheets/d/10Nl4w6VOF7NN3MBuugDy0rCd84uPLjHV/edit?usp=drive web&ouid=101444873968805165718&rtpof=true

Wikidata account creation

Follow steps:

Go to https://www.wikidata.org/wiki/Wikidata:Main Page

Insert of one novel manualy from ELTeC-fra

Label (name of the novel)

Description
instance of P31 literary work Q772563
title P1476 (name of novel)
author P50 (see in label)
language of work or name P407 fra
form of creative work P7937 novel

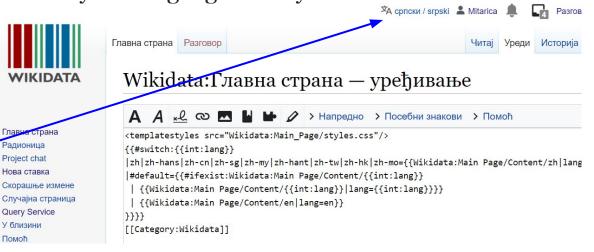

For example see:

https://www.wikidata.org/wiki/Q2699195

How to add a new language in the decription

To use the labelLister gadget on an item, **click on the "Label List" tab at the top right of the item page**. After selecting it, you will see a pop-up with a list of all labels, descriptions, and aliases available by language code. Choose language that you need, and than go back to your language. Now you can see different

labels.

Automate the editing of ELTeC editions of entered novels

Using **OpenRefine** and **QuickStatements** a faster way to add ELteC editions of novels that participants added manually will be shown.

Participants must fill column **QID_novel** in shared Excel file, where will add QID of novel which they manualy created.

Than starts the magic!

It's time to do by yourself!

Wikidata is a multilingual knowledge base of structured data that anyone can edit. The project relies on the efforts of people — just like you! — from all around the world who work together to collect and maintain data in **more than 200 languages**.

Participient will translate titles of ELTeC editions (Serbian, Franch, English...). Then using **OpenRefine** and **QuickStatements** they will add **all descriptions** in Wikidata and connect with **ELTeC editions**.

At the end let's SPARQL! https://query.wikidata.org/
